EXPERIENCE

Tech Skills: JavaScript, C# .NET, learning Node.js and learning React, familiar with Angular JS

IDE: Visual Studio 2017

Non-Technical Skills: Supervision of office staff and systems, as data center functions.

9/25/2017 – Present Software Engineer at Vertafore Pulaski, TN.

Create .NET software solutions to integrate insurance carriers into company comparative rating product. Work with Business Analysts, Project Managers, and Developers to attain optimized results for carriers in a test to production environment.

5/1/2017 – 8/22/2017 Self-Employed performing data compilation for marketing purposes.

1/1/2016 – 1/10/2017 Apprentice Software Developer at Nashville Software School.

- Created two RESTful applications utilizing: Frontend: AngularJS, JavaScript, HTML5, CSS3, Razor; Backend: C# ASP.NET Entity Framework, with SQLite for one app and Firebase for the other.
- Worked on collaborative teams to create web applications, utilizing Trello for project management and GitHub and Git Bash for version control.
- Worked on assigned solo projects as well as team projects utilizing JavaScript, JQuery, HTML5, CSS3, AngularJS, C#, ASP.NET
- Projects: DayTrader, a web application with an API call to Quandl financial database returning the most recent closing price of a NYSE-traded stock. The app allows the user to create a list of favorite stocks and notes for future positions to take. The app uses HTML5, CSS, AngularJS (authentication and factory) VolunteerTrack, a web application with a google map with markers providing the user with charities that need volunteers, as well as helpful links. The user can save information such as their personal charitable contributions, hours spent volunteering, as well as mileage used in the commission of volunteer activities. The database is SQLite, provided by C# ASP.NET, with Entity Framework, Razor, AngularJS, JavaScript, HTML5, and CSS.
